科目概要情報 / Course description

講座概要 / Course description	Chemistry is a branch of science that deals with structure, composition and properties of matter found in living and non-living organisms. Chemistry concepts are usually characterized by interactions of atoms at the atomic and molecular level. It is central to the study of physical environments and biological system and as such the course carries an underlying content of Biology and Physics in addition to the chemistry content. The course involves consolidating content with practical experiments.
到達目標 / Course objectives	<ol style="list-style-type: none"> 1. Appreciate scientific study and creativity within a global context through stimulating and challenging opportunities 2. Acquire a body of knowledge, methods and techniques that characterize science and technology 3. Apply and use a body of knowledge, methods and techniques that characterize science and technology 4. Develop an ability to analyse, evaluate and synthesize scientific information 5. Develop a critical awareness of the need for, and the value of, effective collaboration and communication during scientific activities 6. Develop experimental and investigative scientific skills including the use of current technologies 7. Develop and apply 21st century communication skills in the study of science 8. Become critically aware, as global citizens, of the ethical implications of using science and technology 9. Develop an appreciation of the possibilities and limitations of science and technology 10. Develop an understanding of the relationships between scientific disciplines and their influence on other areas of knowledge.
